

Facilitates easy deployment.

Can be operated and expanded to suit the necessary scale

Miniature IoT

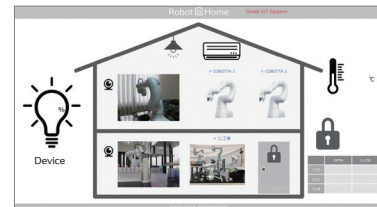

Visualize the status of facility robots and equipment in real time

Using DENSO Robotics Cloud, we added IoT to Robot@Home at the Kariya FA Center. We continue to "cyber-fy" the facility. This solution makes the status of robots and smart appliances available in real time.

Overwhelming connectivity, with support for more than 200 providers

You can easily collect and convert data from edge devices using IoT Data Share, which can connect to a variety of devices in a program-less manner. Product functionality encompasses the ability to interoperate with cloud services.
